Esstisch

Design  
ASCO

Leitmotiv  
Architektur

Die konstruktiv motivierte Gestaltung des Tisches Hada hält, was er optisch bereits verspricht. In der Anmutung eines Werk­tisches liegt die Tischplatte auf vier ausgestellten Stahlrohrbeinen, die durch eine im Fußbereich positionierte Flachstahltraverse mit vier Diagonalstreben verbunden werden. Die Traverse kann bewusst als Fußablage genutzt werden.

The constructively motivated design of the Hada table delivers what it already visually promises. In the appearance of a work table, the tabletop rests on four flared tubular steel legs, which are connected by a flat steel crossbar positioned in the foot area with four diagonal braces. The crossbar can be deliberately used as a footrest.

↑ HIDE SURFACES AND DIMENSIONS

Laminated ASCO table tops (multiplex) are manufactured in a thickness of 28mm. Birch wood layers are glued lengthwise and crosswise. The layered top is then veneered in the desired solid wood, brushed with open pores and oiled once. A 6 cm thick end-grain glue is applied to the long and short sides in the matching solid wood, which also allows the individual selection of ASCO table edges and corners.

↑ HIDE SURFACES AND DIMENSIONS

Board-glued ASCO table tops are made of individual continuous 8-15 cm wide solid wood slats glued together lengthwise. The woods are carefully sorted and selected, creating a naturally balanced character and giving the solid wood table top its harmonious overall appearance. Viewed from the front, alternating horizontal and vertical annual rings are visible, which show an attractive wave pattern.
